

How to use the new functionality for dynamic visualization of the demand and supply curves from the Day Ahead Market on IBEX website?

Since December 2016, on the [IBEX website](#) there is a new functionality allowing users to view a visualization of the demand and supply curves:

On the calendar, the Market participant should choose the desired date for visualization. The results from all trading sessions since the beginning of the Day Ahead Market on 20th of January 2016 are available. Under the calendar there is a button with a clock on it, which is used for selecting of the desired hour for visualization:

After the curves are loaded in the website, the plus (+) and minus (-) buttons or the mouse scroll could be used for changing the scale. Moving through the graph could be done by dragging with the mouse. If the mouse cursor is stopped on a single point of the curve, its coordinates will show (quantity [MWh] and price [EUR/MWh])
